REPORT OF DATA VERIFICATION

-Vukkadapu Aryan Reddy

METHODOLOGY IN ACTION:

MPDVCO Method : MANUAL-PURE DATA VERIFICATION & CALCULATION in ORDER method

This methodology is my own creation specifically designed in order to verify data generated by AI efficiently.

1. Firstly, I would search for trusted sources of information like "www.wikepedia.com" for each and every minor topic in order. (SEARCH).
2. Secondly, I would verify the purity of all the data I have synthesized manually by verifying using all the trusted sources of information for each and every subtopic in order.(VERIFICATION).
3. Finally, I would calculate the percentage of pure data present in the data which I collected by using the TREE Method on CHATGPT 4. (CALCULATION).

" This methodology works perfectly proficient and efficient in order to verify data because this Process is implemented manually for data verification process & calculation of purity in the data synthesized Earlier by using my TREE Method: Truck-Branch-Leaf Method"

THIS DOCUMENT CONSISTS OF THE FOLLOWING SECTIONS:

I. Trusted Data Websites list per subtopic **(in order)**
II. Manual Data Verification statistics **(in order)**
III. Manual calculations and result of Purity and Impurity present **(in total data extracted)**

"THIS REPORT CONSISTS OF THE REAL DATA, STATISTICS, ANALYTICS OF THE VERIFICATION & CALCULATION OF THIS INDEPENDENT RESEARCH PROJECT. ALL OF THE INFORMATION IN ALL OF THIS IS ORIGINAL ACCORDING TO MY MANUALLY IMPLEMENTED METHODOLOGY "
